(54) COLOR FILTER AND LIQUID CRYSTAL DISPLAY DEVICE USING THE SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a color filter by which uniform cell gap can be realized and which has satisfactory productivity.

SOLUTION: After a color layer and a transparent conductive film are formed, a resin light shielding layer is provided to form a black matrix and a spacer in which a photoresist layer for patterning the resin light shielding layer remains as an uppermost layer is formed. Thus, the color filter with the fixed spacer excellent in productivity can be realized in the same number of photolithographic stages as the usual color filter wherein no fixed spacer is used.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
